ORGANIC FERTILIZERS

BIOHUMUS

500ml 2.5kg 5kg 20kg

Organic fertilizer which is derived from the accelerated biological degradation of organic wastes by interactions between Red Californian worms and microorganisms

- Revitalizes, enriches the soil and improves its structure.
- Provides with the main nutrients such as nitrogen (N), phosphorus (P), potassium (K) important for plant growth and development.
- Greatly increases the yield and taste of grown products, also increases the resistance of plants, prevents soil salinization, hardening and erosion.

BIO LIQUID

1l 5l 10l

Faster-acting liquid fertilizer is an extract of biohumus received by special technology

- Can be used for all types of crops, ornamental and home plants, flowers through leaf nourishment, drip irrigation and watering.
- Provides balanced plant nutrition and contains nutrients, microelements, beneficial microorganisms useful for plant growth.
- Accelerates plant natural maturation, and promotes rapid restoration against stress factors (heat, drought, mechanical injuries).

GRANULATED BIOHUMUS

1l 5l

Granulated, compressed biohumus

- Improves the soil physical, chemical and biological properties increasing organic content of it.
- Increases the yield, provides with the main nutrients useful for plant growth.
- Improves cation exchange capacity of the soil.
- Granules reduce the volume of vermicompost, making it easy to use and to store.

Mixture of vermicompost, peat and compost

- Promotes soil structure improvement, making it fertile.
- Promotes rapid flowering of plants and the root growth process, increases the germination capacity and sprouting energy.
- Increases yield, the content of sugar, proteins and vitamins and reduces crop maturity dates.
- Increases plant resistance and stability to unfavorable weather conditions, pests and diseases.

Mixture of peat, compost, vermicompost, perlite and pumice

- Nutritious, biologically pure growing medium for all kinds of seedlings, plants, herbs, vegetables, home and garden flowers.
- Supports faster and healthy growth of plants.
- Moisture retentive (holds water to save you money watering too frequently).
- Light and airy (so plants can easily take root and access oxygen in the soil).
- Does not contain pathogens and is safe for use.

Heterogeneous mixture of partly decomposed plant material

- Improves the physical structure of soil, enriches not fertile and sandy soils.
- Increases water retention in light sandy soils.
- Improves drainage of heavy clay soils, allowing roots to breathe and grow.
- Contains numerous macro and micro nutrients vital for plant life, amino acids, growth and development stimulants.
